## ONE CUSTOMER AT A TIME

---

**“Delivering unparalleled quality, service and value to our customers while creating opportunities for our employees.”**

CSI Inspection was founded in 2008 with the vision of becoming the largest independent NDT company within the continental United States. We specialize in ASNT Certified Inspections Services, including: bottom hole assembly and drill pipe inspections performed by highly trained and certified level II inspectors; which surpasses API and DS-1 standards. CSI has expanded its operations to include value-added products and services, such as hard banding units and on-site mobile repair. We concentrate on resurfacing shoulders and repairing threads. In addition, we are pleased to offer a tubular integrity management program (TIMP) for our customers. We have over 50 strategically placed units for immediate response in the Gulf Coast, Eagle Ford, Haynesville, Marcellus, Bakken, and DJ Basins. We are committed to keeping our customers drilling ahead, with the least amount of down hole failures, drill pipe separation, and unproductive time.

Our fully documented quality control system for all services ensures compliance and complete customer satisfaction.

## INSPECTIONS END AREA | EMI UNITS HARDBANDING

### Inspections: Bottom Hole | Drill Pipe

---

With an average experience level of 15 years, all CSI inspectors are level II certified and possess expert-level analysis of down-hole conditions, including problem-solving techniques and solutions. CSI Inspection services consist of:

- Magnetic Particle (MT)
- Liquid Penetrant (PT)
- Electromagnetic Induction (EMI)
- Ultrasonic (UT)

### End Area Units\*

---

Completely Rigged units:

- Black light
- Dye penetrant
- Ultrasonic end-area equipment
- Independent power source

*\* All equipment is DSI compliant and recalibrated every six months*

### EMI Units

---

Completely rigged units:

- Performance to DSI CAT 3-CAT 5 specifications
- Buggy systems run 2.365"- 6.625" drill pipe tubing
- Independent power and air sources

### Mobile Repair Units

---

Our on-site mobile repair services specialize in repairing shoulders and connections in the field. We have the expertise and equipment to repair all API connections, along with the premium lines of XT and VX, currently at the forefront of the industry.

### Hard banding: Units and Applications

---

CSI manufactures "best-in-class" certified hard banding units and provides expert teams of highly trained and certified operators with a heavy emphasis on repairing existing hard band.

Hard banding applications include:

- Postle duraband and tuffband
- Armocor M
- Stoody
- Tungsten

### Specialized Services

---

- ASNT certified inspection services
- Drill pipe inspection category 3-5
- Wet/dry magnetic particle inspection
- Dye penetrant inspection
- Ultrasonic inspections
- Third party services
- Tubing and casing end area inspections
- Structural inspection
- Premium lathe resurfacing
- Calibration services
- Machine shop compliance services
